

Aydin Pulluk

Modern agriculture modern equipment

AYDIN PULLUK
SINCE 1968

Our this plough is the model which is preferred by modern farming countries due to its time fuel saving feature. In reversible ploughs number of nuts and bolts on mouldboard are less than on other ploughs. So it lasts longer.

2

AYDIN PULLUK
SINCE 1968

As done in all our ploughs; reversible ploughs are made from boron steel, too. You can choose your plough's working width as you can do the same with its underframe clearance, working depth and inch.

3

Open to innovation

Aydin Pulluk, as a producer, who knows the demand a farmers are changing day by day according to product, tractor and type of soil, produces its good according to this and follows up the innovations.

Good ploughing, good products

Obtaining good product requires good plowing. To do this; andjnstment (inch, working depth – working width) should be easy. You can adjust this plough easily.

We offer high quality reversible ploughs at a reasonable price In order to compete with EU, global farmers. We make it easy for our farmers to reach modern agricultural uqipment by making the prices low.

Support to production

Our reversible ploughs are easily adjusted to all the tractors from the lowest to highest hp. You can use our ploughs easily no matter the soil type or product type is.

Adaptable equipment

Easy to reach

You can easily find what you look for at Aydin Pulluk; who has got a big range of product. Even more, ploughs are produced in different types and inches according to demands for different tractor and type of soil.

Long lasting

This product provides non-stop ploughing with its spiral spring system. You can install new security system with one small spare part instead of changing whole system when there is deformation of working part.

AYDIN PULLUK
SINCE 1968

Our Automatic mechanic-spring plough is 3 knife and slat mouldboard. It is manufactured with non-welded body. We have models suitable for all tractors. Its protects tractor and plough by its mechanism on rocky and rooted soils.

Easy to use

Quality hidden in details

AYDIN PULLUK
SINCE 1968

Under difficult conditions ; high efficiency and ploughing is gained by its spiral spring system. You can make the plough bigger by adding +1 body or changing the distance between bodies or adjusting inside width.

Our best-seller in Turkey is mouldboard plough. High type is in our product range. Distance between bodies is arranged optimum distance to obtain good ploughing. All parts touching soil are bor steel.

Classic and economic

It's our the most economical model. Spare parts are standart. It has easy-changable parts and new model mouldboards which turns more soil. It is a model which you'll enjoy while preparing a good seed bed.

High efficiency

We prevent organic substances throwing into air by adjusting ploughing angle. We provide soil to close all those substances. We enrich the soil while ploughing.

Easy to plough

This model is the most preferred one in Turkey and neighbour countries. Parts touching soil are bor steel. Turning (ploughing) angle is just desinged, and feature to close the soil completely. Shares are dual sided.

Maximum productivity

AYDIN PULLUK
SINCE 1968

In this model "non-welded body" used for the first time in Turkey is used without weakening the body. Maximum efficiency is obtained. Ploughing speed is increased according to plough's weight and better ploughing is obtained without tiring the tractor.

AYDIN PULLUK
SINCE 1968

Our farmers can easily change spare parts when needed. Our profile frame convention ploughs are more long-lasting due to their less part numbers. The latest technology is used in this model in addition to its 3 share, slat mouldboards.

Fuel saving

On the contrary to common houghts, our reversible ploughs are easy to use and comfortable. You don't need much experience to do the adjustments. You can do it with easy, small changes.

Product range

Aydin Pulluk offers different products to farmers who deal with vineyards and orchards. This model has small shares and mouldboards. So it doesn't harm the roots. It ventilates the soils and increases the product quality. By its sleds it arranges the distance between trees.

Sustainable agriculture

There is no other machine can replace plough. None of applications could provide efficiency persistence. Ability to reach organic substances-which the soil needs - can be reached by ploughing.

It is the classic model which we have been producing since 1968. Its main properties are kept. It is newly designed with 3-share and slat mouldboards. It is also the most preferred model by neighbour countries farmers.

Happy farmer

We are at all phases of human life. The important thing for farmer is enjoying his/her work. Aydın Pulluk is keeping working for happy and pleased farmers.

Innovative identity

Aydın Pulluk continues to exist everywhere the agriculture is and at every soil and all climates with its innovator identity.

*Suitable for greenhouse
productions*

It is designed for farmers who work in greenhouse (etc) areas. It is our smallest plough and suitable for 10-30 hp tractors.

Water is life

This is the model which prepares the way that brings together the product and water.

*The biggest
in Turkey*

This is our semi-mounted plough. This is the biggest and the most technical plough produced in Turkey. If demanded, the same plough will be made bigger.

It is possible to produce its working width, distance between bodies according to our farmers demands at order. Due to its different body, it can be made as big as wanted when compared to its equivalents.

Minimum fuel, maximum power

AYDIN PULLUK
SINCE 1968

Our semi mounted reversible plough is the biggest plough manufactured in Turkey. Due to its design its balance adjustment is high. It can be produced according to our farmers demands with its optional parts.

AYDIN PULLUK
SINCE 1968

Our aim and target is to provide our farmers plough with maximum power and minimum fuel. Despite being big, it is easy to use. Rood-position provides comfort to our farmers while going between their houses and fields.

High performance

AYDIN PULLUK

AYDIN PULLUK
SINCE 1968

Our dagger supported plough is high performance plough with its dagger on rocky soils when compared to classic share ploughs. As the dagger is eroded, yo'll put forward the dagger and work with a new part.

30

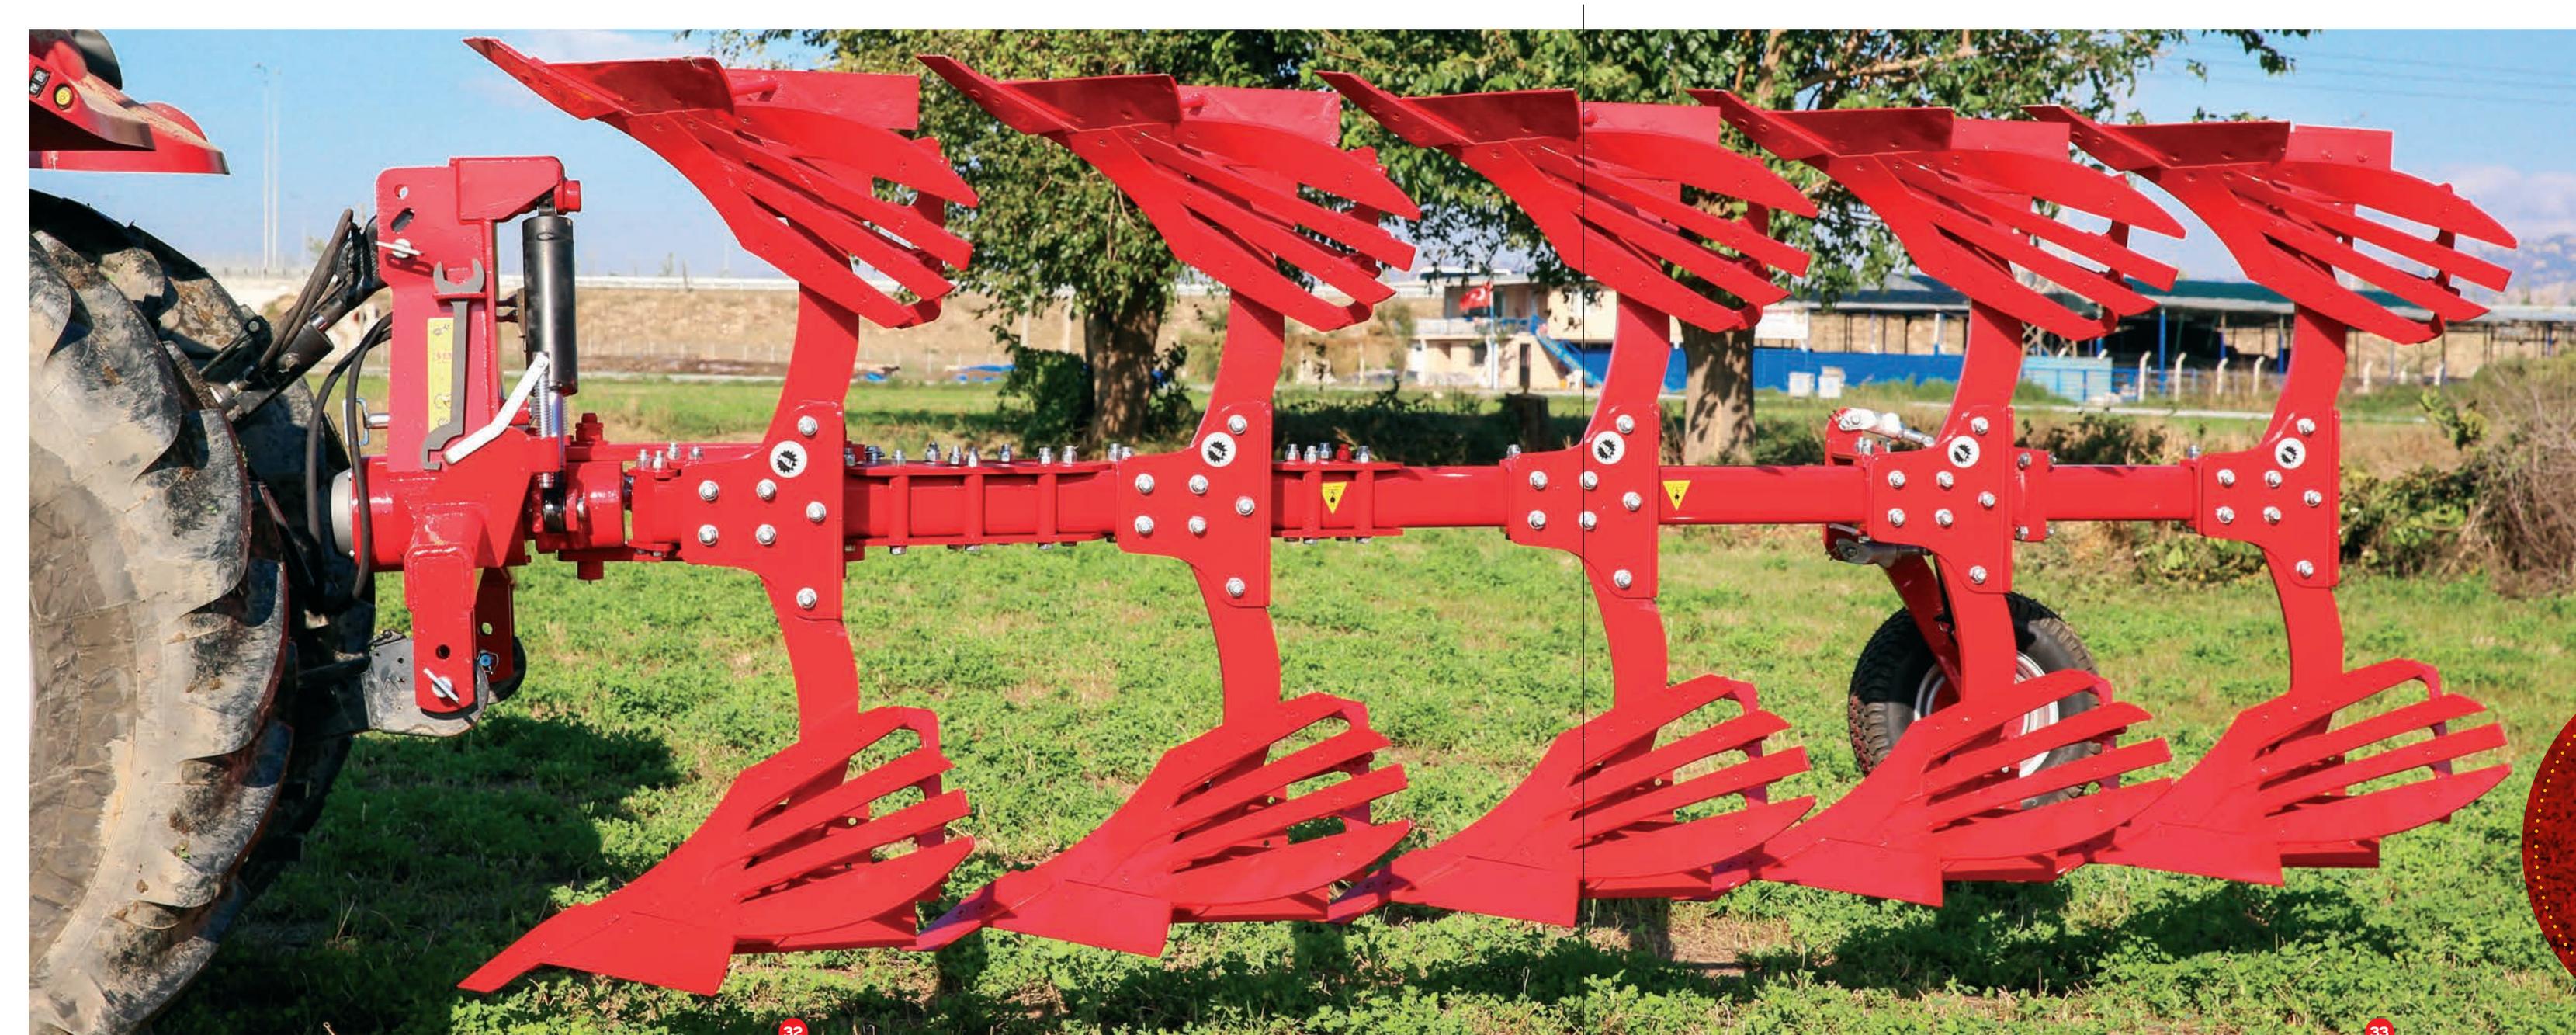

AYDIN PULLUK
SINCE 1968

Our automatic reversible plough is designed for hard soil conditions. With its spiral spring system, high ploughing and efficiency is obtained. You can get perfect ploughing on rocky soils.

Suitable for all kinds of soil

31

*Suitable for
all tractors*

Slat mouldboards
easy ploughing on
wet-humid soils by
decreasing the pulling
power of tractor. IT
provides time Money
saving.

At global standard

AYDIN PULLUK produces this set making plough for the farmers who deal with arboriculture as well as it produces for all other farmers. You can also use it as chanel opening plough. Distance between sets can be adjusted as you wish.

Model variety

Our slat-mouldboard profile frame (conventional) ploughs can be bigger with it +1 additional bodies. You can change its inches according to the soil and tractor. It provides easier ploughing in humid soil.

Customer satisfaction under all circumstances

Our quality policy has been to canalize our investment according to the innavations in agriculture since 1968

Environmentally friendly

AYDIN PULLUK
SINCE 1968

Plough is the most helping machine in the triangle of nature, living creature and machine during the supplying human needs without unbalancing the nature. We follow up the latest technology in agriculture and offer to you our precious farmers.

Perfect result

AYDIN PULLUK
SINCE 1968

Our aim is to produce the newest ploughs that our farmers need without making concession in quality. Meanwhile keeping the after sale service satisfaction at the highest level is one of our targets.
